

# JAKE STRUTTER

## - SETUP & CARE -

Thank you for choosing our products. At DSD our mission is to stay at the top of the industry in terms of quality, customer service, and most importantly, effectiveness in the field. [Tail installation video available at \*davesmithdecoys.com\*.](#)

### Your hardware kit includes:

- Large Washers (2)
- Small Washers (2)
- Nuts (2)

*Spare Parts Included*

## TAIL INSTALLATION

Dry tail by cutting away all fleshy areas and rubbing with borax, then tacking out on a board until thoroughly dry. Position tail so it is roughly centered and resting atop the tail shelf. Maneuver the tail until the stud pokes through and is exposed enough to attach hardware. In calm to slightly windy conditions, the common method of attachment is a single small washer only. In high wind conditions, you may consider putting a large washer onto the tail before adding the small washer. You can also add a nut in addition to both washers for even more holding power.

## HANDLING & SAFETY

For safety purposes, your decoy should be placed inside of the provided carry bag at all times during transport to and from your hunting location.

## STAKE STORAGE

Every turkey decoy that uses a stake has a storage hole on the underside of the decoy. Store the motion stake in this stake storage hole of your decoy where it will remain safe, quiet and with your decoy when you need it. To store your stake, slide the motion stoppers to one end of the stake and insert the stake from the opposite end. Slide the motion stake into the storage hole until it comes into contact with the opposite inner wall of the decoy.

**Warning:** Do not use the decoy to drive the motion stake into the ground as this can damage the decoy.
